

Enhanced Transportation Forensic Engineering: Collision Research Associates becomes part of Kittelson, LLC

(COLLEGE STATION, TX) Two highly respected local transportation forensic firms have joined operations. As of October 1, 2018, Collision Research Associates (CRA) staff will join Kittelson, LLC (KLLC).

Founded by James R. Lock, CRA began its professional practice in 1991. KLLC Vice President Joseph Blaschke is excited about the synergies this will bring our collective sets of clients. "James and his group are highly respected and bring industry leading crash reconstruction capabilities to KLLC. We've admired each other's work for years—teaming up made sense to allow us to collectively grow our national transportation forensic engineering practice."

By bringing CRA into the company, KLLC strengthens its crash reconstruction capabilities and broadens the array of services CRA can offer. CRA clients will now have access to enhanced transportation forensic engineering services, expert consulting, and expert testimony while continuing to work with the CRA team members, all of whom have been retained in the roles they previously held.

"We are grateful to our clients, not only for giving us the opportunity to provide them with forensic services but for their loyalty and friendship," Lock said. "We are confident that our new affiliation will serve us all well."

CRA staff has relocated to the KLLC College Station office at 1008 Woodcreek Drive.
